INTERNATIONAL PROGRAMS FOUNDED

I am the **founder and president** of the [Computing Connections Fellowship](#), a fellowship that provides institution-independent transitional funding for computer science Ph.D. students who need help escaping unhealthy environments. We are in the process of a two year pilot in the programming languages research community.

I am also the **founder and chair** of the [SIGPLAN Long-Term Mentoring Committee \(SIGPLAN-M\)](#). SIGPLAN-M pairs mentors and mentees in the programming languages research community for cross-institutional mentoring relationships lasting a year by default. It currently reaches more than **200 mentors** and more than **300 mentees** across more than **41 countries**, and has been described by mentees as “**life changing**” and “**a career saver.**”

RESEARCH IMPACT

Proof repair, the subject of my PhD thesis, has since been reimplemented by researchers and engineers at [Amazon](#) and [NASA](#), and adapted to the languages they use. It is also the subject of a **DARPA** AI Exploration called [PEARLS](#), a grant for which I am primary PI.

RESEARCH VISION

How can we build a world in which programmers of **all skill levels** across **all domains** can prove the absence of costly or dangerous bugs in software systems---that is, **formally verify** them? I lead a group that builds **proof engineering** technologies to make that world a reality. My group loves to use the whole toolbox---everything from **dependent type theory** to **program transformations** to **neural proof synthesis**---all in service of **real humans**.

I enjoy **distance running**. I used to compete for **Club Northwest**, a top distance running club in Seattle. I served on the board of Club Northwest from 2015 to 2016. I ran **NCAA Division I Cross-Country** in 2009.

I also enjoy **solving logic and number puzzles, writing poetry, singing, studying Arabic and Russian, making bagels, playing Dance Dance Revolution, foraging edible mushrooms, and composing music for the piano.**
