#### RESEARCH VISION

My research makes **program verification** using proof assistants more accessible through better **proof engineering** technologies that make it easier to develop and maintain verified systems. To that end, I develop foundational results in **dependent type theory**, and use those results to drive the development of tools informed by the needs of real proof engineers. My vision is a future of verification with the help of these tools that is accessible to all programmers.

#### **CURRENT ADVISING**

## Cosmo Viola (Ph.D.)

Extending proof repair to handle more more general relations.

## Chris Lam (Ph.D.)

Compiling proofs alongside programs.

### **Timothy Zhou** (undergraduate)

Improving neural tactic prediction models for proof synthesis and repair.

#### UNDERGRADUATE STUDENTS ADVISED

### **JUST FOR FUN**

I enjoy **distance running**. I used to compete for **Club Northwest**, a top distance running club in Seattle. I served on the board of Club Northwest from 2015 to 2016. I ran **NCAA Division I Cross-Country** in 2009.

I also enjoy solving logic and number puzzles, writing poetry, singing, studying Russian, making bagels, foraging edible mushrooms, and composing music for the piano.
