RESEARCH VISION

My research makes **program verification** using proof assistants more accessible through better **proof engineering** technologies that make it easier to develop and maintain verified systems. To that end, I develop foundational results in **dependent type theory**, and use those results to drive the development of tools informed by the needs of real proof engineers. My vision is a future of verification with the help of these tools that is accessible to all programmers.

CURRENT ADVISING

Cosmo Viola (Ph.D.)

Extending proof repair to handle more more general relations.

Chris Lam (Ph.D.)

Compiling proofs alongside programs.

Timothy Zhou (undergraduate)

JUST FOR FUN

I enjoy **distance running**. I used to compete for **Club Northwest**, a top distance running club in Seattle. I served on the board of Club Northwest from 2015 to 2016. I ran **NCAA Division I Cross-Country** in 2009.

I also enjoy solving logic and number puzzles, writing poetry, singing, studying Russian, making bagels, foraging edible mushrooms, and composing music for the piano.
